# CONTENTS OF VOLUME 121

NUMBER 1, MARCH 15, 1982

|                                                                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Construction and Operation of a Novel Pneumatically Controlled Solid-Phase Sequencer                                                                                                      |     |
| <i>Hermann Alk, Klaus Achleitner, Walter N. Strickland, and Claus von Holt</i>                                                                                                            | 1   |
| Convenient and Highly Sensitive Spectrophotometric Assay for Tryptophan 2,3-Dioxygenase                                                                                                   |     |
| <i>Heribert Metzler, Rolf Gebhardt, Walter Oberrauch, and Dieter Mecke</i>                                                                                                                | 10  |
| General Method for the Localization of Enzymes That Produce Phosphate, Pyrophosphate, or CO <sub>2</sub> after Polyacrylamide Gel Electrophoresis                                         |     |
| <i>H. G. Nimmo and G. A. Nimmo</i>                                                                                                                                                        | 17  |
| Chemical Ionization-Mass Spectrometric Approach to Structure Determination of an Intermediate in Bile Acid Biosynthesis                                                                   |     |
| <i>Sarah Shefer, Gerald Salen, F. W. Cheng, B. Dayal, A. K. Batta, G. S. Tint, Ajay K. Bose, and Birendra N. Pramanik</i>                                                                 | 23  |
| Improved Quantitation of Picomolar Amounts of Valine Extracted from Muscle Cell Cultures                                                                                                  |     |
| <i>J. C. Bullaro</i>                                                                                                                                                                      | 31  |
| Filter Assay Method for the Estrogen Receptor Protein: Detection of Both Filled and Unfilled Estrogen Binding Sites                                                                       |     |
| <i>Lawrence Cousens and Barnet Eskin</i>                                                                                                                                                  | 39  |
| Complete Separation of the Base, Nucleoside, Mono-, Di-, and Triphosphonucleosides of Uracil and Cytosine by Polyethyleneimine Cellulose Thin-Layer Chromatography                        |     |
| <i>Robert C. Payne and Thomas W. Traut</i>                                                                                                                                                | 49  |
| Differential AC Calorimeter for Biophysical Studies                                                                                                                                       |     |
| <i>G. S. Dixon, S. G. Black, C. T. Butler, and A. K. Jain</i>                                                                                                                             | 55  |
| Identification of Phosphoserine Residues during the Determination of Amino Acid Sequence in Phosphoproteins                                                                               |     |
| <i>W. Douglas Annan, William Manson, and John A. Nimmo</i>                                                                                                                                | 62  |
| In Situ Protamine Release: A Versatile Sample Preparation Method for the Electrophoretic Analysis of Nuclear Proteins on Acid/Urea-Based Gels                                             |     |
| <i>Randall G. Richards and Barbara Ramsay Shaw</i>                                                                                                                                        | 69  |
| New Method for the Preparation of Solid-Phase Immunoabsorbents                                                                                                                            |     |
| <i>Edwin R. Phillips, James W. Dennis, Bruce E. Elliott, and Robert S. Kerbel</i>                                                                                                         | 83  |
| Microtechnique for the Rapid Determination of the Glycosaminoglycans of Vascular Tissues                                                                                                  |     |
| <i>K. Schmid, M. Wernli, and R. B. Nimberg</i>                                                                                                                                            | 91  |
| Identification of Enzymatically Produced Peptide Fragments by Liquid Chromatography and Mass Spectrometry                                                                                 |     |
| <i>Robert Baranowski, Christof Westenfelder, and Bruce L. Currie</i>                                                                                                                      | 97  |
| Rapid High-Pressure Liquid Chromatographic Determination of Methotrexate and Its Metabolites 7-Hydromethotrexate and 2,4-Diamino-N <sup>10</sup> -methylpteroic Acid in Biological Fluids |     |
| <i>H. Breithaupt, E. Küenzlen, and G. Goebel</i>                                                                                                                                          | 103 |
| Method for Obtaining High Recovery of Purified Subcellular Fractions of Rat Liver Homogenate                                                                                              |     |
| <i>Meir Lahav, Nili Schoenfeld, Orit Epstein, and Abraham Atsmon</i>                                                                                                                      | 114 |
| Fluorometric Analysis of the Dissociation of Oligomeric Macromolecules: Correction for the Adsorption of Exciting and Emitted Light in a Side-Bottom Type Fluorometer                     |     |
| <i>József Batke</i>                                                                                                                                                                       | 123 |

|                                                                                                                                                                                                  |                                                                                       |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|-----|
| Enzymatic Assay for Subnanomole Amounts of L-Fucose                                                                                                                                              | <i>John B. Morris</i>                                                                 | 129 |
| A Rapid Method for the Determination of Guanosine 5'-Diphosphate-3'-diphosphate and Guanosine 5'-Triphosphate-3'-diphosphate by High-Performance Liquid Chromatography                           | <i>Meir Fischer, Thomas P. Zimmerman, and Steven A. Short</i>                         | 133 |
| A Simultaneous Assay System for N-Acetylgalactosamine and N-Acetylgalactosaminitol Using Gas Chromatography/Mass Spectrometry                                                                    | <i>Paul L. Weber and Don M. Carlson</i>                                               | 140 |
| Fluorescamine and Fluorescein: A New Energy-Transfer Pair and Its Application to the Binding of Histone H5 to Nucleosomes                                                                        | <i>Edgar Wingender</i>                                                                | 146 |
| Rapid and Simple Measurement of ATP-Sulfurylase Activity in Crude Plant Extracts Using an ATP Meter for Bioluminescence Determination                                                            | <i>Daniel Schmutz and Christian Brunold</i>                                           | 153 |
| Macroporous High-Performance Anion-Exchange Supports for Proteins                                                                                                                                | <i>George Vanecek and Fred E. Regnier</i>                                             | 156 |
| A Rapid Colorimetric Method for 3-Methylhistidine in Urine                                                                                                                                       | <i>E. Radha and S. P. Bessman</i>                                                     | 170 |
| Azodipyrroles of Unconjugated and Conjugated Bilirubin Using Diazotized Ethyl Anthranilate in Dimethyl Sulfoxide                                                                                 | <i>Bruce W. Trotman, Jayanta Roy-Chowdhury, Gary D. Wirt, and Seldon E. Bernstein</i> | 175 |
| Purification of Yeast Hexokinase Isoenzymes Using Affinity Chromatography and Chromatofocusing                                                                                                   | <i>E. Kopetzki and K.-D. Entian</i>                                                   | 181 |
| A Microcell for the Temperature-Jump Technique                                                                                                                                                   | <i>Detlev Riesner, Metin Colpan, and John W. Randles</i>                              | 186 |
| Modification of the C-Terminal Octapeptide of Cholecystokinin with a High-Specific-Activity Iodinated Imidoester: Preparation, Characterization, and Binding to Isolated Pancreatic Acinar Cells | <i>Melvin Praissman, Richard S. Izzo, and Jesse M. Berkowitz</i>                      | 190 |
| Gas-Liquid Chromatography of Free Amino Acids in the Hyaloplasm of Rat Liver and Kidney Cells                                                                                                    | <i>Janusz Gabrys and Janusz Konecki</i>                                               | 199 |
| A Rapid Whole-Cell Assay for Superoxide Dismutase                                                                                                                                                | <i>Garry C. Whitelam and Geoffrey A. Codd</i>                                         | 207 |
| Protein Determination on an Automatic Spectrophotometer                                                                                                                                          | <i>Dennis B. Rylatt and Christopher R. Parish</i>                                     | 213 |
| A Simple and Rapid Method for the Isolation of Peptides from Sodium Dodecyl Sulfate-Containing Polyacrylamide Gels                                                                               | <i>Ib Mendel-Hartvig</i>                                                              | 215 |

NUMBER 2, APRIL 1982

|                                                                                                                            |                                                                 |     |

## AUTHOR INDEX FOR VOLUME 121

The Subject Index for Volume 121 will appear in the December 1982 issue as part of a cumulative index for the year 1982.

## INFORMATION FOR AUTHORS<sup>1</sup>

*Analytical Biochemistry* is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins when a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**Address.** Manuscripts should be submitted in triplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

**Manuscripts** should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** Please number all pages of the manuscript.

**Text.** The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

**Names of chemical or organic substances** should follow the recommendations of the IUPAC-IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

---

<sup>1</sup> An extended Information for Authors appeared in Volume 115, Number 1, July 15, 1981. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

*Figures* should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is  $8\frac{1}{2} \times 11$  inches ( $21 \times 27.5$  cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

*Tables* should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

*Footnotes* should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

*References* to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125**, 255-260.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246-409, Academic Press, New York.

*Proofs.* Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
